* PHP function arguments:-

→ Information can be passed to functions through segments. A Argument is just like a variable.

→ Example for the php function arguments.

* PHP default Argument value:-

ex:- ? PHp declare (strict_type= 1);
    function set Height (int $min height = 50){
    echo "the height is:-f min height
";
    }
    set hight (350);
    set Height ();
    set Height (135);
    set Height (80);

* PHP function - Returning values used though

* PHP return type declarations:-
    PHP7 also supports type declarations for the return statements.

    Ex:- <? php declare (strict_types=1);
    function addnumbers (float $a, float $b);
    float α

    return $a & $b
    }
    echo addnumbers (1.2, 5.2)
    }/;

* PHP function arguments:-

* Information can be passed to functions through arguments. An argument is just like a variable.

* Example for the PHP function arguments.

* PHP default Argument value:-

Ex:- ```<? php declare (strict_type=1);
        function set Height (int $min height = 80);
        echo "The height is : $min height <hr>";
    }

    Set Height (350);
    Set Height ();
    Set Height (135);
    Set Height (80);
```

* PHP functions - Return values was though.

* PHP return type delaration.

* PHP7 also supports type decleerations for the return statement.
